

Thank you for purchasing the Axner Flocs, a glaze suspender.

Instructions for Axner Flocs:

- Add 1 teaspoon of flocs per 4 gallons of glaze to your water before mixing. If at any time while using the batch, separation occurs, add approximately 1 teaspoon per 4 gallons of glaze slowly while stirring. Immediate results will occur. Flocs may thicken your glaze batch. If this occurs, add water to achieve proper weight. Check with a hydrometer to ensure consistency. 4 oz. will suspend up to 96 gallons of glaze and a quart will suspend up to 768 gallons of glaze.
- Flocs may be used as a substitute for Epsom salt. It contains less than 1% salt and causes no corrosion.
- Flocs seem to work great with glazes that contain little or no ball clay.

Note: If your Flocs crystallizes or freezes at any time, add a small amount of warm water and shake. It's again ready to use.
